SECURING HOMES, ONE AT A TIME.

RESIDENTIAL SECURITY

LOCALLY OWNED AND OPERATED

ACCEL COMMUNICATIONS, INC. is a locally owned and operated full service security and installation alarm company located in Phoenix, Arizona. We specialize in Commercial and Residential Security Systems including local Central Station Monitoring, Fire Protection, Card Access Systems, Maintenance Contracts, Video Cameras, and many other services.

Accel Communications is committed to quality and excellence on all of our systems. A quality well-designed and maintained alarm system will provide a great degree of security, as well as a key deterrent to crime.

Accel Communications would like the opportunity to install and maintain the security system in your home or business.

Give us a call at 623.582.1420, or for more in-depth information, you can visit our website at www.accelcommunications.com.

Home is the place where you are most comfortable and secure. It's your safe haven from the world. But even at home there are dangers.

For some, there's the threat of break-ins and burglaries. For everyone, there's the chance of fire or other emergencies. Thanks to advances in technology, today's alarm systems are not only incredibly efficient and accurate, but so simple a child can use them.

FULL TIME SECURITY

Your security system is like a personal 24 hour sentry. It's always on duty, always vigilant, and always ready to sound an alarm at the first sign of danger. When your system is monitored, it will also alert your emergency responders that help is needed. Whether you're awake or asleep, at home or away, your home is protected. Many insurance companies offer savings on premiums when your system is monitored.

Accel Communication Inc.'s systems are modular, created from a variety of components, providing you with different levels of protection.

Depending on your needs, your system may include:

- ◆ Smoke and fire sensors
- ◆ Glass break sensors
- ◆ Interior/exterior motion detectors
- ◆ Window and door switches

Sensors are the eyes and ears of your system. They detect motion, body heat, or breaking glass, and signal the control panel.

DESIGNED FOR YOU

Because systems are modular, you can specify exactly the level of security you want. Once installed, your system is programmable to customize it to your lifestyle. There are even pet-immune detectors that allow your dog to wander the house without tripping the alarms.

You can program your system to sound an alarm inside and outside the home to alert you and the neighbors, while startling any intruders. When your system is monitored, it will notify your alarm monitoring service, which will then alert the appropriate authorities or a private security response firm.

FEATURES YOU WILL APPRECIATE

Almost any system can provide basic protection from burglary and fire. Our systems offer additional features, some standard and some optional, that make systems easier to use while enhancing security.

CODELESS ENTRY: Instead of entering a code on the keypad, just wave your key fob next to the keypad to turn the system on or off.

FALSE ALARM REDUCTION: False alarms annoy neighbors and may result in fees from your emergency responders. Accel Communication Inc. alarm systems include special features that reduce false alarms.

EASY-TO-USE KEYPADS: You control your system from the keypads. Ours are not only attractive, but are also easy to see and easy to use.

UNDERSTANDING YOUR SECURITY SYSTEM

A security system does not have to be complicated. Let our certified professionals walk you through the user-friendly operation.

The **KEYPAD** is the link between you and your system. It's used to select the amount of security desired and to check system status via easy-to-read displays using simple function keys.

The **CONTROL PANEL** is the brain of your system — it receives and stores information from sensors and keypads throughout your home and communicates this information to the appropriate monitoring station: police, fire, or emergency service.

SENSORS/DEVICES are the eyes and ears of your system. They detect motion, body heat, or breaking glass, and signal the control panel.

- ◆ Sensors on doors and windows and motion detectors alert you of intrusion
- ◆ Smoke detectors are on 24-hour alert to detect fire, whether you're home, asleep, or away
- ◆ Wireless accessories offer remote control capability for your system: on/off control and panic

THE PRICE OF SECURITY

Residential alarm systems are more affordable than ever. You may be surprised at how much security you can afford.

And because your alarm system will be custom-designed for your home, you can pick and choose the components you want to provide the level of safety and convenience you desire at a price that matches your budget.

Invest in a home security system, and you and your family will never be alone in an emergency.
