Commercial & Residential
**SECURITY ALARM COMPANY**
623.582.1420

As a business person, it's your job to ensure the safety and security of your people, facilities, and assets. There are so many threats you have to worry about ... burglary, theft, fire, unauthorized entry, and more.

Accel Communications, Inc provides the highest level of protection to ensure that your business is safe and secure. We offer flexible systems able to provide a combination of intrusion, fire, access control, and network monitoring. Integrating these security features means you have only one system to learn, to program, and to monitor.

You will have strong protection from all common security threats, including:

◆ Burglary and hold-up: In the event of a break-in, local alarms will sound and help will be summoned via your monitoring service.

◆ Fire: Smoke, heat, and fire detectors can be positioned to provide rapid alert at the first sign of fire.

◆ Theft: Protection can be placed on your outside entrances as well as on areas inside your facility, granting access only to authorized employees.

Wireless technology brings state-of-the-art security to any business, easily and affordably, especially when retrofitting existing structures!

ALL SYSTEM ON

DESIGNED FOR YOUR FACILITY

Every one of our systems is custom-designed and assembled from high-quality, modular components needed to meet your specific security requirements. Your system will be configured to meet your organization's schedule and operations, making it easy and convenient for you and your employees to use.

SYSTEM INTEGRATION

You will enhance the security of your building by controlling access through both perimeter and interior doors. Simple programming steps allow you to restrict people to enter only selected doors on specific days and times. You can also program doors to lock and unlock on a regular schedule. You have full override capability, so you can quickly adjust the program to accommodate early or late work schedules, or work schedule disruptions for holidays, weather and other emergencies. Your integrated system can automatically report all openings and closings, and record staff arrival times.

Your fire protection can also be integrated as part of an overall security approach, providing umbrella protection for your organization through a single system.

Our systems are easy to use, so there's minimal training required for you and your staff. Built-in false alarm reduction features help avoid accidental alarms, ensuring reliable emergency responses.

FEATURES THAT ADD SECURITY

Our systems offer additional standard and optional features that make your system easier to use while enhancing security, giving you increased control over your facility.

USER FRIENDLY SYSTEMS:

Control your system from either an attractive, easy-to-use, easy-to-see keypad or from your computer with a simple, robust interface. Set up account files, authorize users, and connect to your system to maintain user codes, door schedules, and holiday dates.

CODELESS ENTRY:

Instead of entering a code on the keypad to turn the system on or off, simply wave a proximity key next to the keypad. It can even unlock the door! Or try our wireless key fob which provides visual acknowledgement when you have armed or disarmed your system.

FALSE ALARM REDUCTION:

False alarms annoy neighbors and staff, and may result in fines from emergency responders. Accel Communications Inc alarm systems include special features that reduce false alarms.

AFFORDABLE PEACE OF MIND

Modular systems and flexible programming options enable you to create a system that meets your needs while staying within your budget. The level of security is entirely up to you, but whatever level you select, you'll have the confidence of knowing that your people, your facilities, and your assets are protected. And you can feel secure knowing that your systems will be installed by our factory trained and certified technicians.
